### EFFECTS OF ACUTE EXPOSURE:

**Ingestion:** May be harmful if swallowed.

**Skin Contact:** Causes severe skin burns.

**Eye Contact:** Causes serious eye damage.

**Inhalation:** May cause damage to respiratory system through inhalation.

**Germ cell mutagenicity:** No data available

**Carcinogenicity:** None of the ingredients are expected to cause cancer.

**Reproductive toxicity:** No data available

**STOT single exposure:** No data available

**STOT repeated exposure:** Not applicable

**Aspiration hazard:** Not applicable.

**Routes of exposure:** Ingestion, inhalation, skin/eye exposure

### EFFECTS OF CHRONIC EXPOSURE:

Prolonged skin contact destroys tissue. May cause dermatitis. Sodium hydroxide solution can penetrate to deeper layers of skin and corrosion will continue until removed. Burns may not be immediately painful and onset of pain may be delayed minutes to hours. Conditions that affect vision such as glaucoma and cataracts are possible late developments. In severe cases, there is progressive ulceration and clouding of eye tissue, which may lead to permanent blindness. Due to its corrosive nature, chronic exposure to high concentrations of aerosol containing sodium hydroxide solution could cause a potentially fatal build-up of fluid in the lungs (pulmonary edema). Symptoms of pulmonary edema (tightness in the chest and shortness of breath) can develop up to 48 hours after exposure and are aggravated by physical exertion.

### Numerical measures of toxicity:

**Oral:** LD50 2154 mg/kg

**Dermal:** No data

**Inhalation:** No data
